Perfect 👆
For **5-mark answers**, the **same structure is used**, but in a **compressed form**.

Your teacher does **NOT** expect all 5 levels in detail — they expect **selected, merged levels**.

5-Mark Answer Structure

(Based on Remember → Understand → Apply → Analyze → Evaluate)

For **5 marks**, write in **3 compact stages**:

1️⃣ Remember + Understand (Definition + Explanation)

What to write

- Short definition
- Brief explanation

☞ **This itself earns ~2 marks**

Example (Generic)

Multiple inheritance is a concept where a class inherits properties from more than one parent class. In Java, this feature is not supported using classes to avoid ambiguity.

2️⃣ Apply (Example / Diagram / Code)

What to write

- One small example
- OR one code snippet
- OR one simple diagram

☞ **This earns ~2 marks**

```
class C extends A, B { }   // not allowed in Java
```

3️⃣ Analyze + Evaluate (Reason + Conclusion)

What to write

- One reason / problem
- One concluding statement

☞ **This earns ~1 mark**

Java avoids multiple inheritance to prevent ambiguity and ensure program simplicity and reliability.

Final 5-Mark Formula □

Definition + Explanation + Example + Reason + Conclusion

That’s it ✓
