Great 👆
For **9-mark answers**, your teacher expects **MOST of Bloom's levels**, but **not as deep as 12 marks**.

Think of **9 marks as a "balanced answer"** — neither short nor very deep.

9-Mark Answer Structure

(Remember → Understand → Apply → Analyze → Evaluate)

For **9 marks**, write in **4 clear stages**:

1️⃣ Remember (Definition)

What to write

- Clear, correct definition
- Use textbook language

☞ **~2 marks**

Example

Multiple inheritance is a concept in which a class inherits properties and behaviors from more than one parent class.

2️⃣ Understand (Explanation)

What to write

- Explain the concept in your own words
- How it works / what it means

☞ **~2 marks**

Example

In multiple inheritance, a child class attempts to access methods and variables from more than one superclass, which may lead to conflicts when similar members exist.

---

3 Apply (Example / Code / Diagram)

What to write

- One **proper example**
- OR short program
- OR neat diagram

☞ **~2–3 marks**

```
class A {
  void msg() { System.out.println("Hello"); }
}

class B {
  void msg() { System.out.println("Welcome"); }
}

// class C extends A, B   // not allowed in Java
```

---

4 Analyze + Evaluate (Problem + Reason + Conclusion)

What to write

- What problem occurs
- Why Java avoids it
- Final judgment

☞ **~2 marks**

Example

If both parent classes contain methods with the same name, ambiguity arises. Java avoids multiple inheritance using classes to reduce complexity and ensure compile-time safety.

Final 9-Mark Formula □

Definition + Explanation + Example + Problem + Justification

Marks Expectation Table

Level	Included in 9 Marks?
Remember	✓

Level	Included in 9 Marks?
Understand	✓
Apply	✓
Analyze	✓
Evaluate	✓ (short)

Examiner’s Checklist ✓

If your answer has:

- Definition ✓
- Explanation ✓
- Example/code ✓
- Reason/problem ✓
- Conclusion ✓

➞ **You are in the 8–9 marks range**.
